

Cover Letter — Senior Analyst Customer Data & Marketing Technology (m/w/d)

Messe Düsseldorf | Boru Lai | leonlai0524@outlook.com | +49 15236845456

Messe Düsseldorf's position in the global trade fair landscape, connecting industries across borders and transforming exhibitor and visitor relationships into long-term partnerships, is exactly the kind of data-driven, customer-centric environment where I want to contribute. The Senior Analyst role appeals to me specifically because it sits at the intersection of customer journey strategy and marketing technology architecture — two areas I have worked across in parallel throughout my career.

At Hapag-Lloyd, I analysed end-to-end booking customer journey data, identifying friction points and drop-off patterns within an agile product team. My findings shaped the product backlog directly, translating behavioural insights into prioritised development decisions. This experience maps closely to your need for someone who can structure customer data into actionable use-cases — from defining touchpoints and measurement requirements to connecting those insights to conversion optimisation. Alongside this, I maintained data quality and reporting consistency across sprint cycles, ensuring that insight outputs were reliable before reaching executive review.

The cross-functional coordination dimension of this role is well reflected in my time at HSBC, where I served as PMO for a USD 8M digital transformation programme. I acted as the structured link between technical data teams and C-level decision-makers — translating complex programme data into executive narratives that influenced investment and prioritisation. This kind of stakeholder orchestration across IT, marketing, and data functions is precisely what effective MarTech governance requires. My analytics stack spans Power BI (Microsoft Certified PL-300), Qlik Sense, Looker Studio, and SAP Analytics, allowing me to work across tooling environments without being tied to a single platform.

I would welcome the opportunity to discuss how my experience in customer journey analysis, cross-functional data storytelling, and marketing analytics can contribute to Messe Düsseldorf's customer data strategy. Please feel free to reach out at leonlai0524@outlook.com or +49 15236845456.

Sincerely, Boru Lai
